192 is appointed, the owners of several heads of cattle must present him with
431 a cow. The abagaragu can, but are not obliged to, do likewise.
231 3) When the king or an umutware dismisses or despoils a chief, the abagaragu of the new chief can also each give him an indabukirano. The Bahutu give goats, sheep, and hoes. [57]

192 INTORE. 1) Like the king, certain great chiefs possess a corps of
231 intore (dancing pages) (1) (2). A rich Mututsi's child who goes to a
635

1. From gutora, "to take," or gutorana, "to levy," "to choose."

2. Cf. Government and Administration, The Intore, p. 78.

provincial chief to become a page brings him a y'intore cow, which is given to the umutware y'intore (commander of the pages), who thus becomes in a way the shebuja of the child's father. The latter however is not held by any bond like an ordinary client.

192 2) Also called intore are the cows given compulsorily by the
231 abagaragu to a noble Mututsi who succeeds his father as head of the
651 family.

3) Tax paid in cows.

192 INGORORANO (3). Cow given to reward a warrior for his courage
231
431

3. From kugurorera, "to gratify."

or for a service rendered. Whoever has cared well for the master's cows (inyarulembo) or ingarigari) or who has cultivated his fields well may receive a cow. To reward the umutware w'intore for his instruction, the father of a page also gives an ingororano.

192 UMUHETO. A cow taken with a bow and arrow (umuheto). This
231 used to be war booty. In the past this name was also given to the tax paid
727 by warriors.
651

192 IMIGOGORO (4). A cow sent every day to the white people to
234
574

4. From mogogoro, "fatigue," "annoyance," "imposition." Before the Belgian occupation these cows were called imbyukuruke (lit., 'parade).

192
234 supply them with milk. In Kinyaga (Shangugu) and in Bugoyi, it is
574 called umuheto. In Ndorwa it is called kibere. [58]

IMBYUKURUKE. A choice cow destined to be shown to a visiting high personage and to provide him with milk during his stay.

192
431
231 IBIHEMBO. Gift of cows to the wife of the king, a great chief, or a patron when she has a child.

The gift made by the Bahutu consisting simply of milk or beer is called y'ibihembo.

192
231
426 INTIZO (1). 1) A man who has been despoiled by his chief re-

1. From gutiza, "to lend."

ceives a cow from a friend as a loan (intizo) until justice is done. The friend may perhaps only give him milk (intizo), because by sending a cow he would ostensibly show his friendship and would thus risk incurring the wrath of the chief.

192
231 2) A cattle owner must give at least one milch cow to his cowherd (umushumba) who does not have time to cultivate for himself.

[465] 3) A Muhutu who cultivates the fields of a Mututsi receives milk (intizo) from him morning and evening.

4) A cow is given to two farmers who share the milk and the payments required in exchange (2).

2. Milking a cow is equal to the salary for one day of cultivation.

[681]
431] IMPONGANO. A cow given in reparation for an offense or as a present to the one (inshuti) whose intervention may help to win the lawsuit.

[696] INGURANO. A redemption cow given by a patron or the head of a family to keep the guilty one from being condemned. [59]

192
437
231 INKUNGURANYO (1). Primus, owner of a heifer approaches

1. From gukunguranya, "to exchange two cows of equal value definitely and irrevocably."

Secundus to ask him to exchange the cow for a female calf or for two bulls. They must not give anything in addition in order to have an absolute right over the exchanged object, but neither of them has the right to take back the exchanged value.

821 was considered a time of mourning. It was forbidden to get married at that time.

232 At all times a bull called Rusanga and five cows of each of the three Insanga herds were kept in a special enclosure inside Musinga's boma, and the king would often come and stroke them and speak to them affectionately.

The Inyambo now live in the province of Buganza, a country of fine pastures and gently undulating hills; being delicate animals they cannot stand the high altitude climate. The Mwami hands over his herds to the umutware w'intebe who in turn entrusts them to a hill chief or to the common Batutsi, although without position of authority, they are of nobler origin than some chiefs and are therefore particularly qualified to care for this choice cattle.

The Inyambo are large, long-legged animals with a less well developed dewlap than ordinary cattle, a deeper chest, long flanks, and an angular, thin, and dry rump. The enormously long horns often attain a length of 1.75 meters. They are in the shape of a lyre or crescent; the width between the tips may be 2 or more meters. [93] The coat is bright russet (igaju) or cheese-colored (igitare), but mostly dark brown (ibihogo).

The Inyambo go back into the kraal every evening and are always bedded down, which is rarely done for ordinary cattle, even by wealthy owners.

234 They are not milked like ordinary cows. Only sufficient milk for their Bahutu guardians is taken daily. If they have a calf, their milk is reserved for the young animal. The offspring of the Inyambo is automatically an inyambo. Even the offspring of ordinary cows may become inyambo.

232 If in a herd of inkuku there is a heifer whose characteristics are similar to those of the Inyambo, the Banyarwanda mate this heifer with an inyambo bull. The calf born of this first union is called imilizo. If the breeders judge that the inyambo qualities are to be found in this animal, it is also mated with an inyambo bull, and the offspring is considered worthy to enter the Inyambo herd.

The inyambo cows are never slaughtered or sold for any reason, such as malformation or sterility; they all die of illness or old age. The males fare differently. When they are full grown

000 swampy valleys. Acrid smoke fills the entire hut. Add to all
362 this several adults, some of whom in many cases may be smoking tobacco, half a dozen children, a few goats, dogs, and chickens, and if during bad weather or at night the only
[136] opening of the hut is closed and the rats, which are to be found in every hut, [25] begin their sport, it is easy to imagine how refreshing it is for any non-Murundi to stay in such a hut.

252 Cooking (kuteka) in and outside the hut is the business of
[462] the wife, assisted, if necessary, by the children. A man will cook only if he has to, for example, while traveling. The
415 only cooking utensil used is the earthen cooking pot (inkono), made by the Batwa potters (see p. 78) or by women who have mastered the art of pottery (Plate 48). Large earthenware pots (imiwindi) with a capacity of up to 20 liters serve as water containers and for preserving pombe beer. Wooden bowls or pumpkin shells are used as ladles. Milk is kept in carved wooden vessels (iwango), generally of unwieldy shape. As among the
[251] Banjaruanda, they are rinsed with cow urine each time before being filled so as to preserve the milk better. Butter, which is
[234] never eaten but used only for rubbing the body, is produced by
[302] shaking the curdled milk in large bottle gourds, and it is always in a half liquid state. The large earthenware vessels all have a round bottom and stand on the ground of the hut, propped up by stones, while various wooden and gourd vessels (ubwato, akako) stand between the latticework of the walls or are suspended in wide-meshed nets. The wooden milk vessels are placed on a bench-like frame near the fireplace along the wall. There are no spoons, only wooden ladles which are often nicely decorated
[531] with carved linear designs. The boiling mush is stirred with a broad wooden spatula ("matchstick") (No. 1 of Plate 46), and when the meal is ready, it is heaped on shallow wooden or
264 woven bowls. In the customary fashion of Negroes it is then formed into little lumps with one's fingers, dipped into one of the boiled herb sauces, and pushed into the mouth.

252 In front of every house there is a wooden mortar (isekuro),
243 shaped either like a cylinder or an hourglass. In this the women
[412] separate the grain from the husks and panicles, or in other words "thresh," by means of a wooden pestle which they pound rhythmically in turn.

232 especially for sacrifice and for their function at the election
778 of the king, and there are others dedicated to one of the principal gods, Imana, Riangombe, Rikiranga (see p. 68 , also p. 184 of original text [not translated]).

When a calf is born, it is rubbed with butter. As soon
233 as the horns appear, the owner tears off the covering epidermis with his teeth and rubs the little horns with butter so as to make them grow well. The calf is then given a name which is de-
[552] termined by its parentage, color, or some other characteristic, or in memory of some deceased member of the family, a chief, king, etc. The calves are put in the pen for six months before being sent to pasture, and after that the young cattle graze in a separate pasture. In the morning and in the evening, before the milking of the cows, the calves are permitted to suck. If a cow refuses to suckle her calf, both her udder and the calf are rubbed with salt water, whereupon the cow will lick the calf and will also allow it to lick and to suck her udder. In order to wean a calf, the cow's teats are smeared with cow dung (No. 19, p. 423).

● 234 Before a cow is milked (kukamma), the calf is permitted to suck for a few moments. Then the Murundi squats down near the udder, holding a vessel under it with his left hand and milking with his right hand. In this process a considerable amount of milk (amata) is spilled on the ground since the vessel has a narrow opening. An unruly cow or one that kicks has her legs tied together while being milked. If the calf dies or is slaughtered, the cow gives no more milk. In this case, to make her continue to produce milk, the skin of her calf stuffed with straw or simply a piece of the hide suspended on a stick is held in front of her nose (No. 22, p. 287; No. 48, p. 141; No. 27, p. 95). This is also true in Ruanda, Ankole, and the other Bahima regions. This artless yet useful deception usually tricks the cows, and they lick the hide and continue to give milk. The amount of milk produced by the long-horned cattle is quite small all over the interlacustrine region. It is seldom more than two to three liters daily, in
234 the morning and in the evening. The milk pails (itschjansi)
415 are always made of wood; in most cases they have a cylindrical shape and a rounded lid. Van der Burgt claims that [45] this

234 [415] shape is to be regarded as the imitation of the phallus of a steer "as though this emblem is inseparably connected with their cult"; I myself offer no opinion on this subject. The milk-pail is rinsed daily with fresh cow urine (amaganga), and from time to time it is "cleaned" with human urine (No. 19, p. 423). It is possible that this custom has ritual meaning aside from the practical experience that urine acts as a mild disinfectant. However this may be, the result of this custom, popular also among many other tribes, is that the taste and smell of the milk is nauseating to Europeans. If a European wants palatable milk, he must have it milked into his own pails.

[272] The Barundi, as well as the Banjaruanda and other Bahima peoples, drink the milk either fresh or curdled, but never boiled. A large portion is put away for making butter. For this purpose the milk is first of all left standing in a large wooden vessel for three to four days until it curdles. Then it is poured into a large bottle gourd (ikisabo) until the flakes of butter separate off. These are fished out with a spoon, pressed together, and then preserved in an earthen vessel covered with fresh banana leaves. The remaining buttermilk [272] is a popular beverage. Making butter, typically enough, is [462] not a man's job, like everything else connected with cattle; it is women's work since butter is not regarded as an article of 302 food produced by a cow but solely as a cosmetic. No Murundi [262] eats butter; nobody uses it for baking, frying, or cooking; it is only used for rubbing the body (see above, p. 28). The same [171] is also true for the Banjaruanda, Banjamporoŕo, Banjankole [Nkole], and the other Hamites.

One of the most popular delicacies for the Barundi, espe- 272 cially for the Batussi, is cattle blood. They obtain it in the [171] same manner as the Banjaruanda and the Massai. Each steer is bled approximately once every three months. A special arrow [411] made for the purpose is used. It has a short, broad, round blade which cannot penetrate far into the body (Fig. 10). Several men hold the [Fig. 10 appears here in the original text] steer by his horns, and then the arrow is shot from a bow into the

[Text continues on page 67]

231 one might be inclined to believe. The cows yield
[234] little milk, and part of this milk is used for making butter, which is employed not for food, but for a cosmetic. Cattle-slaying is (or rather was) not frequent and only young steers, sterile cows, or old beasts are butchered. The cattle are lean, the pastures usually second-rate. And whatever the cattle-breeders themselves may say, they are mainly vegetarians: but the less immediately productive the cattle-breeders' occupation appears, the greater and the nobler the rank it confers to them. It is mainly
[556] an outward sign of wealth, with a superior social standing attached to it that enables the higher classes to procure women and claim the devoted and faithful services of the males. It is worth remarking that the
[462] cattle are cared for by the men, not—save in exceptional cases—by the women.

241 Barundi economy is based on agriculture, which is mainly in the hands of the Bahutu, to whom we must add some impoverished Batutsi and most of the Batwa. Sorghum, beans and peas are the chief
[273] products, but cassava culture is spreading to-day. Bananas are used for brewing beer. (The agricultural techniques are very primitive, though sometimes more advanced in some respects than might be expected: hardly any other implement than the hoe is commonly employed, and yet manuring and irrigation are
[462] known.) Agriculture uses male as well as female labour, but the latter is more common. Among the Batwa only women till the land, and among the Bahutu there are men who take no part in agriculture.

000 This general information will enable us now to understand the chief subject of this address: the intercourse between the elements of the Barundi population where vicinity plays so small a part.

The position towards the political chiefs

643 The country's unity is chiefly based on the sultan's
796 personal power; his prestige is clearly visible in the general mourning and the curious burial rites consequent on his death. Also characteristic was the annual recurrence of an important religious festival usually held in our month of December and called **umuganuro**, the sorghum festival, the sorghum desacralization: only after the festival could the people start sowing sorghum in their fields. The **umuganuro**, however, concerned other agricultural
[178] products, as well as cattle and game. It included the exhibition of a sacred drum (*karyenda*) and a hierogamy—which the king achieved with the greatest secrecy. It involved, as well for the festivities themselves as for the preparation of the requisites the hereditary collaboration of men and women picked from every social level and every region, however distant. And so the festival created stronger ties

Umumkari		Umugore	Woman
Umwere wa giti		Umwana	Child

The cabalistic language of the initiates is not exactly refined. It would hardly be decent to list all the terms in their vocabulary.

Various Impositions on Subjects and Clans

644 Aside from the majordomos, stewards, and couriers (intumwa), one also finds at court the innumerable caterers to His Majesty.

It may be said as a general statement that everyone works for the king: architects, professional builders, weapon makers, blacksmiths, mat manufacturers, basket weavers, potters, tanners, tailors of colobus pelt garments, furnishers of scented wood (3), veterinarians,

[824]
[234]

3. The scented wood umugehsi, when converted into shavings called imibavu, is used to perfume butter.

At the time of the last volcanic eruption in 1912, the king had large quantities of this wood burnt to purify the air, which was tainted by sulphurous vapors.

bleeders of /457/ cows, butchers, and other artisans of all types.

224 644 Even the official "rat catchers" come regularly to carry out their duties, like the members of other corporations. Instead of being designated by the ordinary name of "trap setters" or "rat catchers," they are known by the euphemistic term of "sons-in-law" (abakwe), who come to marry (ngo baje kulongora). This is done so as not to arouse the suspicion of the rats when those important persons come to court.

237 272 438 The honey which the king and dignitaries use frequently in the form of hydromel, their favorite beverage (inkangaza), comes chiefly from the mountainous regions rich in flowers and trees.

233 attain his end. The loss of a cow is regarded in much the same way as that of /a member/ of the family. Numerous are the suicides among Batutsi who do not believe that they can survive royal disfavor or an epidemic that is decimating their herds.

[237] Everything cows yield is highly valued, /504/ their flesh, their hide, their milk, and even their dung, which has many uses.

[291] Every self-respecting woman who can afford it must dress in a cowhide. This skirt is part of the trousseau at the time of marriage and is passed on from mother to daughter until it is worn out. As for

● 234 milk, it is almost exclusively chiefs' sons' food. The poor regard it as
272 a special dainty and can only covet it from the rich. It is largely taken in curdled form. Fresh milk is not regarded as worthy of men, but as good for children at best.

Prior to the European penetration the Banyarwanda had never thought of boiling it, and native ideas suffered an upheaval when the Whites were observed to cook it before drinking it. The following

[524] riddle illustrates the importance and value of milk in the eyes of
[539] the natives. Question: "What is the most improper thing, that causes the greatest embarrassment and constraint?" Answer: "A fly drowned in milk or sitting on the king's forehead." The impropriety is the

[687] same in both cases. Death would invariably result for a servant who should be so unmindful as to present His Black Majesty with milk stained by an impurity, no matter how slight. The servants in charge of offering ceremoniously to the king the seven or eight small bowls which he must bring successively to his lips are well aware of this .... How many of those unfortunate people formerly paid with their lives for a mere suspicion of impurity! It is true that those Draconian measures were usually motivated by fear of poisoning.

262 Cow meat is a choice morsel and a true dainty, especially for the poor, who taste it only rarely. It is also practically the only meat permitted to women, others being taboo to them. Even cow

237 urine has its daily and current use. /505/

It is used to wash the milk pots and bowls. As for dung, it is put to many uses: to plug up holes and cracks in the wooden kitchen utensils, to coat hut walls in order to ward off the wind and cold, to rub over the body for certain skin ailments, etc.

192 Inka z' inkuke (gukuka, "to come out of," "to come from")
233 serves to designate cows which are merely in one's keeping.

Milk cows are always placed at the disposal of the chief, who never lacks milk.

Inka z'intarama (a term peculiar to the Bugoyi /region/), cows that are milked late in the morning and in the evening.

Inka z' imigogoro (imiruho), cows ("who cause trouble") because they often die or bring other worries to their owners, who are taxed on their milk.

Inka z' inyambo (indende), "cows of imposing size."

Inka z' ingegene, "ordinary cows."

Inka z' inyagisanze, "cows who graze in pastures which are always green."

Inka z' intahira (gu-ta-hira or gu-ta-gemura), "cows whose owner has full rights over them and is not subjected to any bondage toward his chief on their account.

[517] Inka z'imilizo, "cows with a (short) tail." The Batutsi sometimes shorten the tails of their heifers for esthetic reasons. /509/

Inka z' inkuku, "cows of small size."

Ikimasa, "ox"; impfizi, "bull"; ubukombe, "a bull in his prime" or one whose services are highly valued, hence the wish and expression, Ukagir' ubukombe! "May you own a fine bull!"

Inyana, "calf"; ishashi, "heifer"; imbyeyi, "mother cow"; inka y' issave or urubereri, "cow who has never calved"; ingumba, "cow who has become sterile"; inka y' issugi, "cow who never lost a calf"; iliza, "cow who has calved at least once"; ijigija, "cow who has calved many times"; inka y' ubusuri, "cow who lost a calf"; insindirano, "cow who is given the calf of another"; amabuguma, "old beasts," etc.

192 Fresh milk is called amata y' inshyushyu; curdled milk,
234 ikivuguto; the milk of a cow who has just calved, umuhondo; the milk of a cow who is pregnant again, amasitu; fresh milk mixed with water, umwerera; one night's milk, umubanji; whey, amachunde or amenda, etc.

● 234 Although the large-horned Batutsi cow is used almost exclusively for its milk, it is not a good milk producer. The annual milk production of a medium-sized cow, according to the reports of missionaries, does not exceed 400 to 500 liters. Dr. Kandt (2) says that an excellent cow gives three liters of milk daily.

2. Kandt, R., Caput Nili (Berlin, 1904), p. 283.

[445]

Fig. 32. Wooden Vessels for Storing Milk, from Mulera. (1/6 actual size. L 15167. 33 1/2 centimeters high. L 15165 . 45 centimeters high.)

The cow is milked only in the presence of its calf. The Banyakisaka told me that only then would a cow give milk. If the calf is accidentally killed, they deceive her with the calf's hide for the first few days, giving it to her to lick during milking so she will not hold back the milk. Only after some time can she be milked without the hide. The calves are brought to such before the animals are let out in the morning and after they return at night. After the calf has drunk for a while, it is taken away from the cow and held while the cow is milked by the cowherd. When the milking is finished, the calf is returned to the cow and allowed to suck until it stops of its own accord.

234 [142] While the cow is being milked, a fire of cow dung is kept burning beside her. The smoke keeps off the troublesome stable flies, and the animals can stand quietly.

Young calves are kept in special small huts or in closed-off portions of the entrance room of the dwellings (umuliango).

415 The milk is stored in cylindrical vessels (kianzi) crudely carved out of wood. The vessels are washed with cow urine, and from time to time they are fumigated. A cone-shaped lid 272 is made from a bundle of straw sewed to form a spiral. The milk is drunk chiefly when it is curdled (kivugutu); it is beaten with a small stick to change this consistency. Fresh milk (amata) and buttermilk (amachunde) are also drunk.

[413]

Fig. 33. Arrow for Bloodletting, Ruanda. (1/6 actual size. III E 13744. 58 1/2 centimeters long.)

Besides milk, the blood of cattle is also drunk. For this purpose the bulls are bled from time to time by shooting a special arrow into the neck vein at close range. The short iron tip of the arrow is set into a wooden shaft. The upper part of the shaft is bound, to prevent the wood from splitting and also to prevent the arrow from penetrating too deeply into the vein. The lower end of the arrow has a notch into which the bowstring fits. When the blood is drawn off, a tourniquet of rope is tied around the neck below the wound.

The blood is drunk either fresh or cooked. It is sometimes [846] also mixed with milk, and in this form it is given to women after childbirth "to replace the lost blood."

232 Bloodletting is also practiced on sick animals by specialists. It is said that the animals are given the drawn blood as a reward.

262 Meat is eaten only on special occasions. Beef cattle have a very great value, and beef, therefore, is regarded as the greatest delicacy.

234 302 Butter is not eaten. It is used to anoint the body and to smear on clothes. Large gourds (kicabo) are used for making butter; they are held at the neck with one hand and rocked back and forth on the ground. Butter is stored in small clay [143] and 415 wooden vessels (akachendo). The latter often have looped handles and are then called uchende yo mukondo.

233 The local form of intensive agriculture on very fertile soil is not easy to combine with the extremely extensive cattle raising. Barn feeding is unknown. The animals graze all day in the open and are locked into the kraal (ingo) at night. Thus, even in the densely populated and highly agricultural regions, it is very difficult to keep even the milch cows near the settlements. The rest of the animals are driven out to more remote pastures. For example, the Bagoye drive their cows eastward into the primeval 233 forest on the watershed. The animals are cared for by special 465 Batutsi caretakers who are paid to do this. For his service the herdsman gets the milk the first two months, since the cow is not returned to the owner until her calf is two months old. The herdsman also gets a jug of beer worth one hoe. He is, however, held accountable for the cow and must replace animals which are killed or stolen.

246 Pastures receive no special attention. On the northern slope of Mount Ndisa, however, I saw an irrigation system that watered the mountain meadows. Otherwise the steppes are merely burned off at the end of the dry season; this removes the withered grass and the young grass comes up abundantly after the first rain, the ground having been fertilized by the ashes. Needless to say, grass fires have greatly contributed to the deforestation of Ruanda, especially in the less populated areas. Granted that the forests have been destroyed by the farmers, nevertheless it is the herdsmen who make a second growth impossible. Grass fires rage throughout the country. In Mulera and Bugoye where everything is under cultivation, one sees fires only on the volcanic plains.

233 661 Since no fodder is stored, the cattle become very thin during the dry season. It is not uncommon for Batutsi chiefs to have their herds driven into the sweet potato plantations of their farmers, where great damage is done. No matter how great their loss, the Bahutu cannot drive the cows out nor resist in any way.

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

643 and each king had a hill kept for his grave alone. On this a
766 large house was built and the grave was dug inside it; servants were selected to look after the tomb, and cows were dedicated to the dead king. The hill was thereafter looked upon as sacred and no king would walk upon the hill where a predecessor lay buried. Though only one cow was killed for
[782] the king at his death, two or three hundred were sacrificed at the end of the mourning.

643 The king usually stated which son was to reign in his stead
721 and if possible his wishes were respected; but if he had made no appointment, the chiefs chose a prince to be their new king. If in this case any brother prince objected, the two princes went to war until one or the other was killed.

644 The king's mother and her brother acted as advisors to the
766 king. A special district about four miles from the tombs of the kings was reserved for the burial place of the kings' mothers.

CHAPTER XXX

LIFE AND OCCUPATIONS OF THE PEOPLE

Food—serving meat—entertainment of visitors—fire—the cattle—care of the cows—value of cows—birth of calves—goats, sheep, and bees—agriculture—growing millet—drums—dances—adoption—slaves and servants

Food

262 THE Batuse were not so dependent upon milk as were the
● 234 cow-people of Ankole, but it formed an important part of their diet. When a man rose in the morning, his wives or
[302] servants brought butter and anointed him, rubbing it well into the skin. They then gave him as much milk as he could drink and he took no solid food till evening. At noon he might drink beer or milk, after which he usually slept for a time. In the evening, however, he had a meal of meat and plantain or millet porridge, and after it he might drink milk again.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

April. Tillage of fallow-land in preparation for potato planting next month. Planting of yams, gourds.

May and first half of June. Second tillage of sorghum fields. Beans were weeded. Potatoes were planted. Banana groves were cleared of grass. Cassava planted on hill-tops was gathered.

Long dry season

June, second part. Sweet potatoes and cassava planted in the bottom of valleys. Granaries were stocked.

July. Harvesting of beans, sorghum, maize.

August. Tillage of soil.

September. Tillage went on. At the end of the month there could be an early sowing of beans.[20]

In agricultural tasks, there was no specialization by sex. Men and women worked together in the fields. Although to a large extent the Hutu culture was permeated by the Tutsi scale of values, they did not share the noblemen's disdain for agricultural work. Their ideal type of successful man was that of a rich and hard-working peasant. They were proud of such a reputation when they achieved it, although they recognized that the status of a powerful Tutsi was much higher. But it belonged to another order practically closed to them. In a hierarchical society, certain ideal types may embody values that are for a lower stratum at the same time supreme but not sought after.

Cattle were never reared for their meat in Ruanda. The Tutsi and Hutu appreciated meat very much, but cattle were not usually slaughtered just to be eaten, except occasionally as when a barren cow was getting old. But the contribution of cattle to the diet was great: milk and butter were the food *par excellence* for Tutsi noblemen. The Hutu also liked dairy products very much, but a good supply of them required a larger number of cows than a Hutu would normally possess. Only cows feeding calves were milked. During the dry season their production was very low. In recent years, the average milk production was only from 1 to 1·5 litres a day (from about 1¾ pints to 2¼ pints) including that taken by the calf. Hides were formerly used for clothing purposes.

As may be expected in a society dominated by pastoralists, livestock was a major focus of interest in Ruanda culture. Its importance in the political structure—which will be considered

pick up a piece of firewood and chase the hyena. However, if she hears thieves or a lion or antelope or wild pigs in the fields, she gives the cry of alarm so that the neighbours will come to help her. One need not think that the Rundi consider a woman courageous who is at home alone night after night with several babies and who chases away wild animals and thieves.[15]

In a Tutsi household, all of the tasks of the Hutu household must be done and in addition those which result from the fact that the houses and the yard are used as corral and barns. If a Tutsikazi is lucky, her husband is wealthy enough to provide her with Hutu to do the farming and with one or more Hutu or Tutsi girls to help her in the house and yard. If this is the case, the Tutsikazi's job is to command and supervise others. However, even a Tutsukazi of a very good patrilineage will very likely have to work at least a little in the fields and do some cooking and other household chores. Whether it is the wife, a daughter, or a servant girl, somebody has to clean the yard after the cows have been taken to pasture. The cow dung has to be collected and taken to the fields where it is needed as fertilizer. Fresh earth has to be spread over the puddles and mud that the cows have left, and it is necessary to look in on the calves that are kept in the various houses of the dwelling unit. If a calf or a child or a Hutu is sick, the mistress of the house must prepare the medicine. The wife of a herder has as her first obligation the proper care of the milk which her husband or the boy who milks the cow gives into her care in the morning and the evening. She lets it accumulate so that she can churn every few days. Then, she must clean the butter and put aside some to be used for cooking, some to be mixed with red ochre to be used as a cosmetic, some to annoint the mats of the bed when her husband is at home. If the family is not rich enough to pay a herd boy and if the sons are still young, the Tutsi husband and wife take turns watching over the cows at night. At dawn, both may sleep: thieves will not come once it is daylight.

The richer one is, the more serfs and servants there are to do the work in the house and the fields and to attend to the cattle. Among the very wealthy, the wife is primarily the administrator of her husband's property. She supervises the workers, she gives them orders, she punishes those who misbehave and those who are lazy, and she receives visitors, who are frequently men of high position. The proper education of a Tutsikazi of good family is the responsibility either of her mother or of the princess in whose household she is brought up. There is hope that a daughter will be married by a wealthy man, that she will be literally a *mwamikazi* who will never have to do menial tasks.
